\*\*\* Intern

With the recent advancement of civilization man has been inventing various tools to assist him in living in the changed environment. Internet is the latest and the most powerful device that has taken the world by storm that allows us to display and read web documents hosted on the Internet. The Internet is revolutionizing and enhancing the way we as humans communicate, both locally and around the globe. Simply put, the Internet is a network of linked computers allowing participants to share information on those computers. Internet is the fastest and is the most reliable medium of communication. In the field of medicine especially in forensic medicine internet can be most important tools to popularize this branch amongst younger generation. Internet has made everything available online. In the present scenario, a degree of adeptness in the use of the Internet is a grave necessity. Search engine is a searchable database of Internet files collected by a computer program (this program is sometimes called a wanderer, crawler, robot, worm, spider, etc.). Online Education System is a reality these days with more and more website is providing online education both useful for medical students and experts in forensic field. We reviewed the use of internet in Forensic Medical Education and work out how internet can be used in Forensic Medical Education System with the help of a website or web portal.
